Art Unit: 2627

1) Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

2) The I.D.S filed 10/06/2003 has been considered by the Examiner. However, the Japan and/or foreign document(s), if they have not been written in English, are considered to the extent that could be understood from the English Abstract and the drawings.

Form PTO-1449 or PTO/SB/08 is(are) attached herein.

3) The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed. The following title is suggested:

DOMAIN WALL DISPLACEMENT MAGNETO-OPTICAL RECORDING AND
REPRODUCING APPARATUS.

4) The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

5) (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the

Art Unit: 2627

invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6) Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by SHIMAZAKI et al (6,628,574).

SHIMAZAKI et al discloses a domain-wail-displacement type magneto-optical recording medium for recording or reproducing an information by irradiating a light beam to a data region subsequent to a preformat region as claimed in claim 1, comprising:

a recording circuit that starts recording of an information in the data region at a predetermined timing with a detection signal obtained in the preformat region being used as a reference (figure 10 shows a circuit for recording information data to a domain-wail-displacement type magneto-optical recording medium, figure 11 shows the recording circuit is performed based on wobble tracking pits and clock pit in servo area (preformat area)); and

a reproducing circuit that starts reproducing of the information recorded in the data region at a timing earlier than the predetermined timing with the detection signal being used as a reference (figure 12 shows the reproducing circuit is performed based on wobble tracking pits and clock pit in servo area (preformat area)).

As to claims 2-3, SHIMAZAKI et al shows a clock pit and the detection is based on clock pit (figures 11 and 12, clock pit).

7) Claims 5-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

8) The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Applicant is reminded that in amending in response to a rejection of claims (if the rejection involves with any applicable arts), the patentable novelty must be clearly shown in view of the state of the art disclosed by the references cited and the objection made. Applicant must also show how the amendments avoid such references and objections. See 37 CFR § 1.111(c).

Form PTO-892 is attached herein.
